### **NEWS RELEASE- EXPLORATION UPDATE**

June 12, 2008 – (RMD: TSXV) Richmond Minerals is please to provide an update on its 100% owned Triple Lake Exploration Project, located 30 km south of Timmins, Ontario.

Complete assay results have been received for the first two holes of the Triple Lake property diamond drill program. Hole RMD-02 intersected a mafic dyke that assayed 254.1 grams per tonne silver over a 0.31-meter interval (91.34 to 91.6 metres down-hole). A second zone within RMD-02 intersected a mineralized gabbro that assayed 1.41% copper, 9.3 grams per tonne silver, and 1,110 grams per tonne zinc over a 1.22-meter interval. This higher-grade zone is found within a wider interval that assayed 0.78% copper over 2.42 meters (14.53 to 16.95 meters down-hole).

Anomalous values for gold, copper and zinc were detected within several sections in Hole RMD-01.

Assay results for the remaining Triple Lake drill holes (approximately 220 samples) are still outstanding and are expected in three to four weeks.

Warren Hawkins, P.Eng in his capacity of Qualified Person under National Instrument 43-101 has reviewed the contents of this news release. For further information contact Warren Hawkins, Exploration Manager at (416) 603-2114.

We seek safe harbor.

On Behalf of Richmond Minerals,

{signed}

Matthew Goldman  
Corporate Secretary
