NEWS RELEASE- EXPLORATION UPDATE

March 26, 2008 – (RMD: TSXV) Richmond Minerals is pleased to provide an update on its 100% owned Triple Lake Exploration Project, located 30 kilometers south of Timmins, Ontario.

The total project area has been increased from 1344 to 2055 acres. In-fill staking was recently completed to cover prospective stratigraphy between Richmond's Triple Lake Gold property claim block and its CF-2 claim block. The Triple Lake Gold property is host to a vein on which a 55-foot shaft was sunk and 155 tons of ore were shipped in 1932. Grab sampling of this vein in 2007 returned gold values of 41.38 g/t, 12.62 g/t and 3.91 g/t. Historical sampling on veins in the southern portion of the Triple Lake Gold property claim block returned gold values up to 2.0 ounces per ton. The CF-2 claim block covers a recently identified airborne electromagnetic (EM) cluster and follow-up ground geophysical surveying returned 6,052 parts per million (0.6%) copper and 191 parts per billion gold.

Additionally, the CF-1 claim block was increased in area from 356 to 593 acres. The CF-1 claim block also covers a recently identified airborne EM cluster.

Richmond Minerals Triple Lake Project diamond drill program is on going. Core sampling is up-to-date and samples have been submitted for various analyses. Drilling results will be released on an ongoing basis.

Warren Hawkins, P.Eng in his capacity of Qualified Person under National Instrument 43-101 has reviewed the contents of this news release. For further information contact Warren Hawkins, Exploration Manager at (416) 603-2114.

We seek safe harbor.

On Behalf of Richmond Minerals,
