### **NEWS RELEASE- EXPLORATION UPDATE**

September 10, 2007 - Richmond Minerals Inc. ("Richmond")(RMD-TSXV) is pleased to announce that a reverse circulation drilling program will commence on Richmond's 100% owned Lac Mistamisk property in the third week of September, 2007. The Lac Mistamisk property is located approximately 200 kilometres northwest of Schefferville, Quebec. The property covers a recently discovered, strong radiometric airborne anomaly. The dimensions of the radioactivity anomaly are believed to approach 800 to 1,000 meters in strike length. In the immediate area southeast of Lac Mistamisk, boulders carrying values as high as 4% U3O8 and 15 ounces of gold per ton are known to occur. These boulders are located approximately 4 kilometres east of Richmond's newly discovered radiometric airborne anomaly. Richmond anticipates drilling 4 to 5 boreholes within the anomaly area before the end of September, 2007.

In addition, ground magnetic surveys have been completed for the Ste. Anne du Lac property, located north of Mont Laurier, Quebec. Two magnetic anomalies were identified in the central and south-eastern areas of the property. These anomalies appear to be strong iron-oxide copper gold (IOCG) exploration targets, and have similar exploration potential to the historical Allied, Tom Dick and Lac Hanson uranium deposits near Richmond's Ste. Anne du Lac property. The proposed radiometric airborne survey of the Ste. Anne du Lac property has been delayed until the spring of 2008, due to the scheduling delays of Richmond's geophysical contractor.

Warren Hawkins, P.Eng in his capacity as Qualified Person under National Instrument 43-101 has reviewed the contents of this news release. For further information contact Paul Ankcorn, President of Richmond, or Warren Hawkins, Exploration Manager at (416) 603-2114.

We seek safe harbour.

On Behalf of Richmond Minerals,

{signed}

Matthew Goldman  
Corporate Secretary
